

# “Calle Jardin Park”

Completed 2008

Before

The project site is located at the terminus of Calle Jardin and is adjacent to Creek Side Park. The project includes native plant materials that and soft surfaces that compliment the open ambiance of the space. The park area adjoins an existing park located in an adjacent City that includes turf and other high water use plants. The scope of the project was intended to demonstrate an alternative approach to designing a passive linear park and at the same time maintain the open ambiance and the inclusion of native plants colorful flowers.

In this project, typical turf grass was replaced with Carex Pansa which requires much less water than conventional turf and was placed alongside the turf area found in the adjacent park project. The project was a proven success and the City has received outstanding compliments from the residents in the neighborhood.
