

Orange County Central-Coastal Natural Communities Conservation Plan/Habitat Conservation Plan (NCCP/HCP), encompasses 208,000 acres of central and south-central Orange County. Specifically, the NCCP/HCP covers thirty-nine (39) species and twelve (12) natural communities and has established over 37,000 acres of habitat reserves. The nearest reserve to the project site established under the NCCP/HCP is a habitat linkage about 0.8 mile to the northwest (NROC 2005). There is a 1,110-acre City of San Juan Capistrano open space area about 0.6 mile south of the project site and east of the I-5 (Greeninfo 2018).

The proposed project would not conflict with the Orange County Central-Coastal NCCP/HCP, because it is not located within or adjacent to a designated or proposed reserve area. No Impact.

### **Mitigation Measures**

#### **Summary of Potential Effects to Biological Resources**

Project implementation of Mitigation Measures BIO-1 will ensure that any potentially significant impacts to biological resources are reduced to a level of less than significant.
